COVID-19 FACE SHIELD

Product details

SOLIDARITY IN THE FIGHT AGAINST COVID-19

To address an unprecedented shortage of personal protective equipment, our face shield can be part of the workaround solutions to help tackle the COVID 19 pandemic. It can protect you from coughs from people in front of you, but does not replace wearing a mask. These products have not been medically tested, but are recommended by the health authorities. They are industrially manufactured, with the greatest care. TECHNIWATCH may not be held liable for use of this substitute product, which each customer accepts unconditionally in placing their order and using this product.

COMPLETELY TRANSPARENT

We use a transparent shield, to avoid impairing the wearer's vision. These face shields are designed to be multi-purpose, enabling continuous visibility for a smooth work flow. The anti-misting treatment prevents any breathing and communication difficulties.

UNIVERSAL COMFORT

This face shield is designed for universal standard use, while maintaining a high level of comfort. The contact foam is anti-allergenic, washable and soft to the touch.

COMPLETE PROTECTION

These face shields provide an "integral" barrier, covering from under the chin to above the eyes. The materials are flexible and safe to use, 26 cm in height, with shoulder cutouts to allow easy head movements. They can be cleaned or sterilised if necessary. They are re-usable over the long-term.
