COATED TWEEZERS

Anti-slip coating

Ref.: B163000-R

COATED TWEEZERS ARE USEFUL FOR OPTIMAL ADHESION WHEN HANDLING YOUR COMPONENTS, THANKS TO THEIR ANTI-SLIP COATING.

The technical specifications of the coating used to make the active parts of our tweezers were developed exclusively for the field of watchmaking. This high-adhesion material makes it easy to handle oscillating weights, bridges or watch crystals...

There are two types of tip:

- With extra-fine black tips, coated N°5 tweezers provide a precise grip on the finest components and allow you to reach hard-to-reach areas (tweezer reference: B163000-R).
- Thanks to their wider but flat surface, white tips are used to handle larger components or needles (tweezer reference: B163000-R-242).

In case of wear or breakage, its tips can be replaced easily using a screwdriver.

We can also design other custom shapes.

Technical specifications:

- Synthetic tips
- Interchangeable

Size:

130 x 15 x 9 mm

Weight:

20 grams

COATED TWEEZERS

Product details

Products	Tip type	Type of point
Black coated tweezers B163000-R		
White coated tweezers B163000-R-242		

RECOMMENDATIONS:

These high-end tweezers must be used with care. The synthetic tips remain fragile and can break if dropped for example.

The tips can be cleaned by quickly giving them a quick wipe with an alcohol-soaked cloth.

REPLACING THE TIPS

Use a mechanic's screwdriver (type PB 5180/1-80 - Screwdriver Pozidriv PZ1/SL 80 mm) for the Phillips head screw.

This self-tapping screw requires a high torque and axial pressure during screwing.
